

We support the proposed bill that would require public input to CT processes for planning and scheduling tree work along our roads.

There is a real need to balance concerns for road maintenance with thoughtful consideration of visual impact. In many cases we have seen clear cutting along our highways and medians that in subsequent years is not maintained.

We have also seen areas where trees have been butchered by a rotating blade that was used to rip limbs from the trees.

If you are going to trim trees- do it right and with real concerns for the curb appeal of our state.
